Lipikaar . Q: Python - Lazy Concatenation on List of dicts I have a list of dicts as follows: data = [{ "identifier": "456789", "subject": "math", "topic": "physics", "chunks": [{ "name": "a", "q_weight": 10, "topic": "physics", "v_weight": 1, "q": "What is the subject of quantum mechanics?", "v": "What is the source of energy in the macroscopic world?" }, { "name": "b", "topic": "math", "q": "What is the subject of the calculus?", }]] What I want to do is to make a dynamic concatenation of the chunk names so that they are listed in the same order as in the list of chunks. Eg: So far, I've been able to do the following: for element in data: print element for i in element.get("chunks", []): print i.get("name", "ERROR") This gives me the following output: {'identifier': '456789', 'subject': 'math', 'topic': 'physics', 'chunks': [{'name': 'a', 'q_weight': 10, 'topic': 'physics', 'v_weight': 1, 'q': 'What is the subject of quantum mechanics?', 'v': 'What is the source of energy in the macroscopic

Lipikaar is a Sanskrit typing program that allows you to type in Sanskrit with a normal English keyboard. Type in Sanskrit online, MS Word, Facebook, . Unlike other typing apps, Lipsikaar gives you the ability to type in Sanskrit on the web, MS Word, Facebook, Google+ and Twitter, as well as with your keyboard. The application is easy to use and you can type in several ways: with a keyboard that has a Sanskrit character set, or with a mouse. You can choose keyboard or mouse typing option and also choose keyboard, on fffad4f19a
