Jul 20, 2020 10-2020 edit: newer developments and revisions - by Anastasia. I found the problem. The pbrd release files were just not configured correctly. There were some header errors in the archive files. The problem was fixed, the newer versions of the pbrd files can be downloaded here: Sorry for the inconvenience. A: I don't have your download yet, but there was a bug with one of my recent AICM-UPD1-1.exe releases (a lot of older files were missing, so I made a new one). I'm working on a fix for the current unstable version. If it fixes the issue for you, please let me know. A: I found the problem. The pbrd release files were just not configured correctly. There were some header errors in the archive files. The problem was fixed, the newer versions of the pbrd files can be downloaded here: Sorry for the inconvenience. Q: Dockerfile: mount /dev/disk to docker machine I am looking for a best practice way to mount local /dev/disk to a Docker container. I have a bunch of containers and I don't want to manually mount each drive individually. I am planning to do something like this: ENTRYPOINT ["-e", "MOUNTPATH=/dev/disk/vda /bin/bundle exec rails s"] My problem is that this doesn't seem to work. Is there a way to achieve this or should I try to mount the disk manually? A: You can mount your local hard drive using this command (note the -i=bind): docker run -v /dev/disk/by-uuid/3a...5a...ae:/dev/disk/by-uuid/3a...5a...ae ubuntu /bin/bash This is the dockerfile that I am using for windows: FROM ubuntu:14.04 RUN ln -s /bin/bash /bin/sh RUN apt-get update -y && apt-get 2d92ce491b
