THE KING OF FIGHTERS XIV STEAM EDITION UPGRADE PACK 2 PC download and install from Steam This Steam activation code includes bonus items: all DLC characters and costumes at no additional cost.Q: How to convert an array into a custom object class in Java I'm trying to convert a string array to an object but I can't figure out how to do it. The class I'm trying to make is called Office and it contains 3 fields (full name, title and office number). My professor made the class below but I don't know how to convert an array into this class. class Office { String name; String title; String officeNumber; public static Office getOffice(String[] officeNumbers, String[] fullNames, String[] titles){ Office office = new Office(); office.name = fullNames[0]; office.title = titles[0]; office.officeNumber = officeNumbers[0]; return office; } public String getName(){ return name; } public String getTitle(){ return title; } public String getOfficeNumber(){ return officeNumber; } A: So, it looks like you want to create an Office using the 3 String fields in your class. So, you need to use the new operator with those fields to create an instance of the class. A simple way of doing this is using the constructor: public static Office getOffice(String[] 2d92ce491b
